Spartanics Introduces Standard Speed Plastic Card Inspection At November Cartes 2009 & IT Security 2009

*For Release
November 17, 2009*

(www.spartanics.com) Spartanics introduces the Spartanics 915 Standard Speed Plastic Card Inspection System at [Cartes 2009 & IT Security 2009, Paris, France: November 17 - 19, 2009 Stand 3C037](#) , giving mid-sized card manufacturers single run automated plastic card inspection at the 100% error-free standard. Designed for those with more moderate production requirements, the Spartanics 915 Standard Speed Plastic Card Inspection System fully inspects both sides of cards at the rate of 400 cards/minute – (insert link).

The Spartanics Standard Speed Plastic Card Inspection System is best-match technology for producers of plastic cards of all types---smart cards, ID cards, financial cards, loyalty cards, drivers' licenses, gift cards, telephone cards, access control cards

Like the high speed Spartanics 930 Automated Plastic Card Inspection System, the Spartanics Standard Speed Plastic Card Inspection System uses the same unparalleled control software and features—

-Up to 70% cost-savings compared to manual inspection operations.

-Set up is easy with the unique “Golden Training Set” software for all new and existing jobs.

-Double-sided inspection of every card for defect-free inspection with single runs.

-Unsurpassed measurement accuracy of chip and magnetic stripe placements according to ISO/ANSI standards.

-Built-in “Get-In-Touch PC” that combines video, audio and PC remote control for instantaneous service backup to anywhere in the world--- Spartanics' unique In “virtual service technician”.

For a complete list of Spartanics 915 Standard Speed Plastic Card Inspection System see (link to brochure pdf on Spartanics site). This model is available at 30% the cost of the Spartanics automated inspection systems designed for larger volume outputs.

Mike Bacon, Spartanics VP Sales and Marketing, says, "In these economic times production costs need to be controlled and the unreliability of manual inspection needs to be managed. If you do the math, the labor cost savings for automated inspection in the typical mid-range card manufacturing plant can be staggering. Our first investors in Spartanics' automated card inspection systems have weathered the economic downturn successfully, in part, with the help of this technology. Now we are making the same production efficiencies available to a much wider swathe of companies so that they too can get these same production efficiency benefits."

Rolling Meadows, Illinois, USA-headquartered Spartanics (www.spartanics.com) is known for best-in-class technology with state-of-art control software engineering at its core-- for plastic card manufacturing, tool-free (laser-based), steel rule die, and male/female hard tool cutting systems, among other equipment for finishing products made from flat stock materials. Its worldwide service organization uses state-of-the-art virtual service technician technology and also maintains offices and spare parts in Europe.
